

What is an inverter in a wind energy system?

The inverter is an indispensable component of virtually all electric-generating renewable energy systems. In this article, we'll discuss the types of inverters and the functions they provide in a wind energy system. Inverters come in three basic types: grid-connected systems with battery backup.

What is a grid connected inverter for a wind turbine?

Grid-connected inverters for wind systems are frequently sold with the wind turbine. Manufacturers specify the grid-tied inverters for their wind turbine because every turbine has a different output voltage range. One turbine may produce AC that ranges from 0 to 300 volts. Another may produce wild AC from 0 to 200 volts.

How to choose a wind turbine inverter?

If you are installing a 48-volt you'll need a 48-volt battery-based inverter, and you must wire your battery bank for 48 volts. It is a good idea to talk with the wind turbine manufacturer to obtain their input on the best inverter. Modified Square Wave vs. Sine Wave: The next inverter selection criterion is the output waveform.

Do you need an inverter for a battery-based wind turbine?

If you are installing a battery-based system, you'll need a battery-charging wind turbine and an inverter that's compatible with batteries. Most installers carry inverters they have a high degree of confidence in. Consequently, they will make a recommendation that fits your needs from their product line.
