

Can a 300W inverter handle a 60v battery?

Power of 300W is enough. It just has to be reliable. Your inverter fried because it didn't have a high enough input voltage range (the spec said 61v max, which can't handle a charged 60V lithium battery, if your battery is lithium). Search on grid-tie inverter, or solar inverter. Those are designed to handle larger batteries and voltages.
