

What is a semi finished product?

1,500,000 content corner Semi-finished products occupy a unique and critical position in the manufacturing chain, serving as the intermediary stages between raw materials and the final product. These items, which can range from partially processed metals to pre-assembled components of larger machinery, represent a...

What are semi-finished products?

Semi-finished products are high-value plastic items made using extrusion techniques. faigle's semi-finished product range comprises around 600,000kg of articles in more than 1,200 dimensions and made from 100-plus different materials - all permanently in stock and immediately available.

How are semi-finished plastic products processed?

Our semi-finished or semi-finished plastic products are processed from various materials by continuous forming such as pressing, casting or extrusion into sheets, tubes, rods and bars. These are variably processed into finished components by machining and non-cutting processing such as turning, milling, drilling or hot forming.

Why should you choose our semi-finished products?

In addition, the high strength combined with low weight and the possibility of further processing by bonding, welding or hot forming offers a wide range of applications for our semi-finished products. The supply of spare parts for rubber and plastic components is often a challenge. The basic prerequisite is forward-looking supplier management.
