

Why did solar module prices rise in April?

Solar module prices in Europe rose slightly in April, but this only reflects a trend already expected and announced at the beginning of the year. The price increase is particularly noticeable for high-efficiency modules with different backsheets, as there are hardly any offers left in the lower power classes.

Why is monitoring the price development of solar modules important?

Monitoring the price development of solar modules is of crucial importance for investors, manufacturers and other players in the solar energy industry. A sound understanding of market trends makes it possible to make the most of opportunities and take forward-looking decisions.

Are solar modules becoming more expensive?

Solar modules have once again become more expensive in the retail and spot markets this month, although at a somewhat slower pace. All power classes increased by an average of 0.5 euro cents per watt peak. This trend is evident both in traditional module wholesalers and on various online trading platforms.

Why are solar module prices rising in Q2 2025?

The recent surge in module prices is driven by expectations of an installation rush up to the first half of Q2 2025, following two key solar policy changes announced by the National Development and Reform Commission (NDRC).

"Solar photovoltaic module price" [dataset]. IRENA, "Renewable Power Generation Costs in 2024"; Nemet, "Interim monitoring of cost dynamics for publicly supported ...

Transparent and reliable solar price trends and market news with accurate, IOSCO-certified data. This solar industry analysis covers solar materials production in Asia, the EU and the US.

Comprehensive guide to solar module prices in 2025. Current costs, market trends, buying strategies, and price forecasts. Updated with ...
