

Can solar power power a water pump?

The point is that connecting solar energy directly to a water pump shortens the life of the pump. If the pump's design is such that it needs AC voltage, then the pump will burn out quickly. Solar panels produce DC voltage and will burn out AC appliances in a matter of minutes. It gets worse too.

Can a solar panel be connected to a water pump?

You could connect a solar panel directly to a water pump. It is not a good idea, though. The erratic pulse of electricity produced by the solar panel will burn out the pump at some point. That process can take a few seconds to a few years. The point is that connecting solar energy directly to a water pump shortens the life of the pump.
