How much does a commercial battery energy storage system cost?

Average Installed Cost per kWh in 2025 In today's market, the installed cost of a commercial lithium battery energy storage system -- including the battery pack, Battery Management System (BMS), Power Conversion System (PCS), and installation -- typically ranges from: \$280 to \$580 per kWh for small to medium-sized commercial projects.

How much does the energy storage system cost?

The energy storage system is a 4MW, 32MWh NaS battery consisting of 80 modules, each weighing 3 600 kg. The total cost of the battery system was USD 25 million and included USD 10 million for construction of the building to house the batteries (built by Burns & McDonnell) and the new substation at Alamito Creek.

What is the economic value of energy storage?

Energy storage systems enable facility operators to store electricity (charge the storage) during lower cost periods and deploy the generation (discharge the storage) during higher cost periods, providing economic value.
