Where do solar panels go?

Rooftops are the most common places you'll see solar panels, but you have other options too. Installing solar panels can be a great leap toward electricity cost savings and energy efficiency. But the road to making it happen can be long and tricky. One problem you'll likely encounter: Just where will these panels go?

How do I choose a solar panel site?

Soil conditions must also be suitable for mounting structures. An ideal site should have an abundance of solar irradiation, meaning it receives plenty of unrestricted sunlight throughout the day, although recent advancements in solar panel technology allow solar panels to produce energy even on cloudy days.

Where should solar panels be installed in the UK?

South-east and south-west facing roofs can also be suitable locations for solar panels, usually generating at least 80% of the energy a south-facing system would produce. Not a bad return. When it comes to roof pitch, the optimal angle for solar panels in the UK falls between 30 and 40 degrees.
